

QueuePro Fixed and Removable

PERMANENT & SEMI-PERMANENT BASE OPTIONS

Our full range of QueuePro retractable stanchions are available with fixed and removable base options, ideal for permanent or semi-permanent queue systems. For fixed applications the stanchion is fitted with a 5"/130mm flange for surface mounting. Optional flange covers are available. When occasional removal may be necessary a socket is set into the floor and the stanchion is fitted with an insert which slides into the socket. A cap fits flush with the socket flange for safe closure when the stanchion is removed.
