

WeatherMaster 300

LONG RUN OUTDOOR SAFETY BARRIER

WeatherMaster 300 features a tough recycled rubber base, durable stainless steel post and an extra length 16'/4.9m belt. This product is specifically designed to create long run barriers where its 16'/4.9m belt halves the numbers of barriers needed with the industry standard 7.5'/2.3m belt. The base features convenient carry handles and is tough enough to be driven over! WeatherMaster's stainless steel post is far more durable than the PVC of competing products and its double powder coating gives excellent weather resistance. The post unscrews from the base so the unit can be stored flat when not in use.

16'/4.9m Belt

Tough recycled rubber base

Convenient carry handles

Durable stainless steel posts

Post unscrews and stores flat

Slow retract brake
